

Here's how to save and load docker images:

Example scenario: To save a docker image from a docker repository and save it as a tar file locally.

1. Save the image as a tarball

```
docker save repositoryname:tag > repotag.tar
```

2. Zip the image

```
gzip repotag.tar
```

3. Copy the tarball to the new machine.

```
scp repotag.tar.gz <foreign machine>
```

4. Unzip The tarball

```
gunzip repotag.tar.gz
```

5. Load the docker image

```
docker load < repotag.tar
```

6. Find the Image ID

```
docker images
```

7. Tag the image

```
docker tag repositoryname:tag
```
